

Jeffrey Jacobson, Ph.D.

617-435-0517 jeff@enterprisevr.com,
<https://www.linkedin.com/in/jeffreyjacobsonvr/>

XR Consultant

SUMMARY OF QUALIFICATIONS

- Cutting-edge experience developing and applying XR technologies (VR, AR, MR, etc.)
- Extraordinary skill in communicating technical information to any audience
- Long experience researching business sectors' emerging needs for XR
- Command of 60 years of useful published scientific research on VR and its applications
- Outstanding ability to elicit and match client needs to innovative existing technologies
- User experience (UX) design skills for creating and building solutions
- Project management experience and skills
- Published work on Educational VR cited 1000+ times in the academic literature
- Widely known as an XR champion, pioneer and promoter

EMPLOYMENT

CEO, EnterpriseVR (aka ConstructionVR), Boston, MA

2014 - Present

- Founded this consulting organization to develop sector specific awareness of XR technology applications in construction industries, education.
- Introduced architecture firms Shepley Bulfinch, Payette, and DRA to VR tools and their use.
- Developed and delivered training workshops for staff of local architectural firms.
- Led 12 companies in VR/AR demonstrations at Architecture Builder's Expo, Boston, 2016 and 2017.
- Spoke at meetings of the Autodesk User Group, the Building Information Management (BIM) Council, and the Boston Society of Architects (BIM and Construction Management groups).
- Built a VR simulation of a lab design with interactive material selection for Consigli Construction.
- Configured CAVE-like VR systems, using WorldViz and MiddleVR, for Scalable Display Technologies.
- Build a high-end VR visualization of a Manhattan luxury residence for Lanson Properties.
- Virtual Construction of a Server Room for Consigli Construction.
- Created an advanced VR Lighting Simulation for Ver-Tex Shading Solutions.
- Co-organized a workshop on immersive media in Education at the Harvard Graduate School of Ed.

Sample Projects

Scientific Advising for Luminopia, a startup launched by Harvard Innovation Labs (2017)

Collaborated in literature review and research to support development of a next generation product for Luminopia's approach to the treatment of common vision problems using VR. Identified several viable product concepts, which improves their options and reduces their risk.

Trained Visual Analytics Lab (MIT) Senior Staff in VR/AR Project Management (2017)

Introduced senior staff to the basics of VR/AR technology: approaches to decision making on its relevant and effective uses, management of projects, optimization of existing AR/VR tools for their purposes. Used a programmer/artist team to demonstrate possible applications. Supported process of equipment selection. The outcome was clarified direction and reduced risk. Lab construction is now underway.

Designed and Built a VR Simulation of a Server Room for Consigli Construction (2016)

Using the construction company's CAD model and design, my programming skills, and my artist team, we built a VR simulation of a server room they were building for Mathworks Inc. The simulation was used in a project status meeting between the senior management of both companies. The outcome was Mathworks' leaders being well informed and newly confident in proceeding with the project. Also, Consigli saved time and money, because the simulation revealed design flaws usually found after construction begins.

Workshops on VR/AR for Scalable Display Technologies (2015 – 2017)

Developed and delivered monthly workshops on VR and AR for the Architecture, Engineering and Construction (AEC) industry for Scalable Display Technologies. They needed entrée into the AEC to market its software for projection-based displays (for example, a CAVE) and its super-smartboard, the Huddlewall. The outcome was increased awareness of Scalable offerings, increased sales, and invaluable feedback from the potential user community on its needs.

Board Chair and Co-Organizer, BostonVR, Boston, MA (a 501c3 non-profit) 2015 – Present

- BostonVR is a 5000+ member group of VR explorers and enthusiasts, 5th largest in the world.
- Managing the organization's financial and legal affairs.
- Helping the CEO plan and organize events: engage speakers and demo providers.
- In this role of VR champion, present, serve on panels, and provide demonstrations at events, conferences, and university classes at organizations such as Boston CHI, Harvard, Northeastern University, University of Pittsburgh, and the Learning & the Brain Foundation.
- Mentored local hackathons: HoloLens, Reality Virtually MIT, MedStart.

Executive Director, PublicVR, Boston, MA (a 501c3 non-profit) 2008 – 2014

see <http://publicvr.org>

- Conducted research in educational VR and Mixed Reality for the public domain.
- Attracted and mentored 19 students to academic internships, all of whom published their work.
- Developed the **Egyptian Oracle Project**, a mixed reality performance with audience participation, funded by a competitive grant from the National Endowment for the Humanities.
- Created the **Living Forest**, virtual field trip in a virtual forest using a digital dome theater. On contract for the Complex Systems Research Center, UNH, and funded by the National Science Foundation.

Research Lab Engineer, Medical Virtual Reality Center (MVRC) University of Pittsburgh Medical Center, Pittsburgh, PA 1998 – 2002

- Built the MVRC lab and a VR CAVE for research and treatment of balance disorders using VR.
- I created the software it runs on, trained staff in its use, and how to build their own virtual worlds.
- The lab supports quality research and treatment to this day, using the same software and hardware.

Technical Director, SIMLAB, Studio for Creative Inquiry (SFCI), Carnegie Mellon University, Pittsburgh, PA 1993 – 1995

- Managed artists, historians, and programmers for groundbreaking projects to reconstruct major archeological sites and envision future planetary exploration.
- Projects include: Virtual Pompeii (DeYoung Museum, San Francisco, CA), Virtual Egyptian Temple (Guggenheim Museum, New York, NY), Virtual Mars (Carnegie Science Center, Pittsburgh, PA).

Programmer, Secure Computing, Honeywell, Minneapolis, MN 1987 – 1991

- Helped write the core of an operating system for the NSA. *Confidential* level security clearance.

EDUCATION

- Ph.D. Information Science (2002 – 2008) – School of Library and Information Sciences, University of Pittsburgh, Pittsburgh, PA
 - **Dissertation:** An experiment using an artificially intelligent learning game that showed increased learning with VR. See <http://publicvr.org/publications/IJGCMS-PublicDraft.pdf>
- M.S. Information Science (1996 – 1997) – School of Library and Information Sciences, University of Pittsburgh, Pittsburgh, PA
- B.A. Computer Science (1986) – University of Texas at Austin, Austin, TX

RECENT PRESENTATIONS

- Spoke at “Emerging Educational Technologies”, a course at Harvard Graduate School of Ed., 2017.
- Served on panels "Real Estate" and "AEC Fireside Chat" at the NYVR Expo, October 2017.
- Served on a panel on VR/AR in Classrooms at the Merging Minds & Technology conference, Nov. 2017.
- Spoke on Immersive Media at the BostonCHI, November 2017 meeting.
- Spoke on Immersive Media in Construction at the BIM Council, November 2017 meeting.
